Professional Profile

Researcher and software engineer: Bayesian Optimization, 3D, Embedded Systems, Web.

2014–Present

Independent Software Engineer, Vilnius

2013–2014

Postdoc, University of Lugano

2011–2012

Postdoc, École des Mines de Saint-Étienne

2008–2009

Postdoc, UCLA

1999–2008

MSc (Tech), DSc (Tech), Helsinki University of Technology, Nokia Scholarship (1999)

1995–1999

BSc (EE), Vilnius Gediminas Technical University

Selected Projects

Adast Maxima MS80 (2020 - 2024), [GitHub](#)

Joint work with Saulius Rakauskas.

Developed firmware in C (avr-gcc) for an industrial paper cutting machine, emphasizing reliability, precision, and long-term maintainability under continuous production use.

Automotive Optimization (2012), [HAL Report](#)

Participated in a collaborative research project involving CFD, Bayesian optimization, and distributed computing using the INRIA ProActive PACA Grid.

Developed an efficient Expected Multi-Point Improvement approximation via a specialized Unscented Transform to reduce computational cost.
